Regression analysis of MTCARS

Stanislav Prikhodko

Friday, May 22, 2015

Overview

Looking at a data set of a collection of cars, they are interested in exploring the relationship between a set of variables and *miles per gallon* (MPG) (outcome). They are particularly interested in the following two questions:

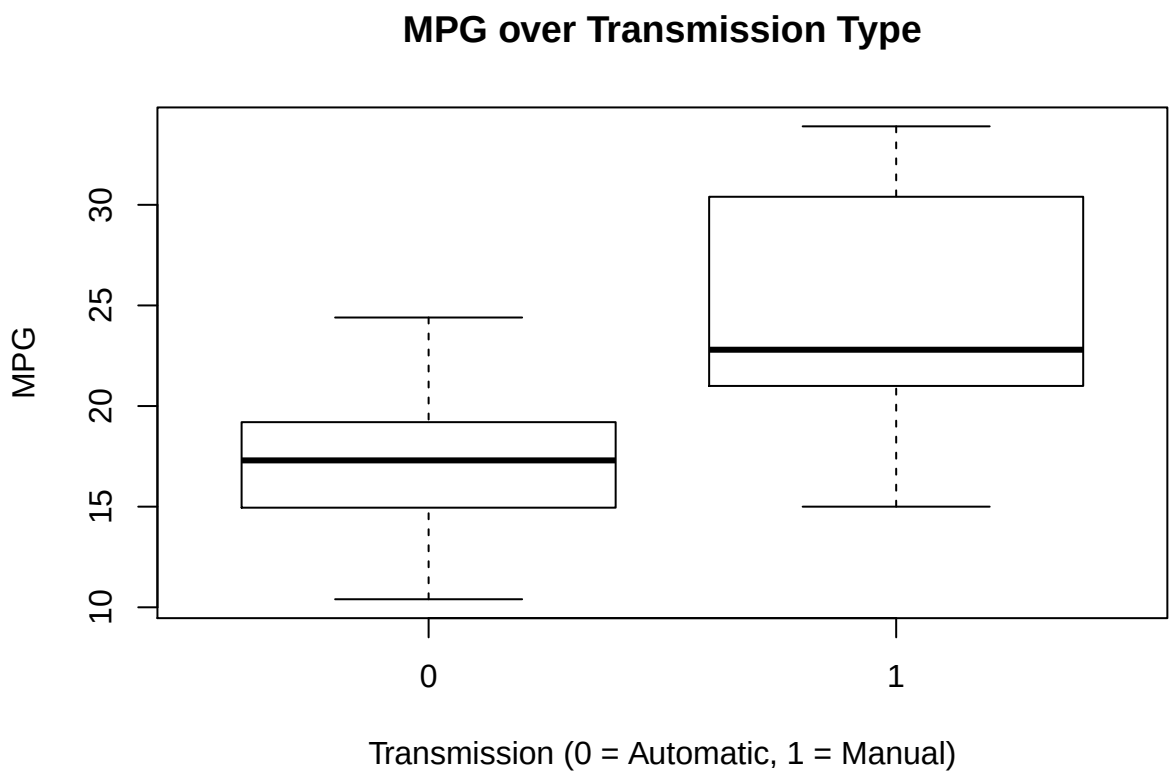
- "Is an automatic or manual transmission better for MPG"
- "Quantify the MPG difference between automatic and manual transmissions"

Exploratory Data Analysis

```
data(mtcars)
head(mtcars)
```

```
##                   mpg cyl disp  hp drat    wt  qsec vs am gear carb
## Mazda RX4         21.0   6  160 110 3.90 2.620 16.46  0  1    4    4
## Mazda RX4 Wag     21.0   6  160 110 3.90 2.875 17.02  0  1    4    4
## Datsun 710        22.8   4  108  93 3.85 2.320 18.61  1  1    4    1
## Hornet 4 Drive    21.4   6  258 110 3.08 3.215 19.44  1  0    3    1
## Hornet Sportabout 18.7   8  360 175 3.15 3.440 17.02  0  0    3    2
## Valiant           18.1   6  225 105 2.76 3.460 20.22  1  0    3    1
```

```
boxplot(mtcars$mpg ~ mtcars$am,
        xlab="Transmission (0 = Automatic, 1 = Manual)",
        ylab="MPG",main="MPG over Transmission Type")
```



Model Selection

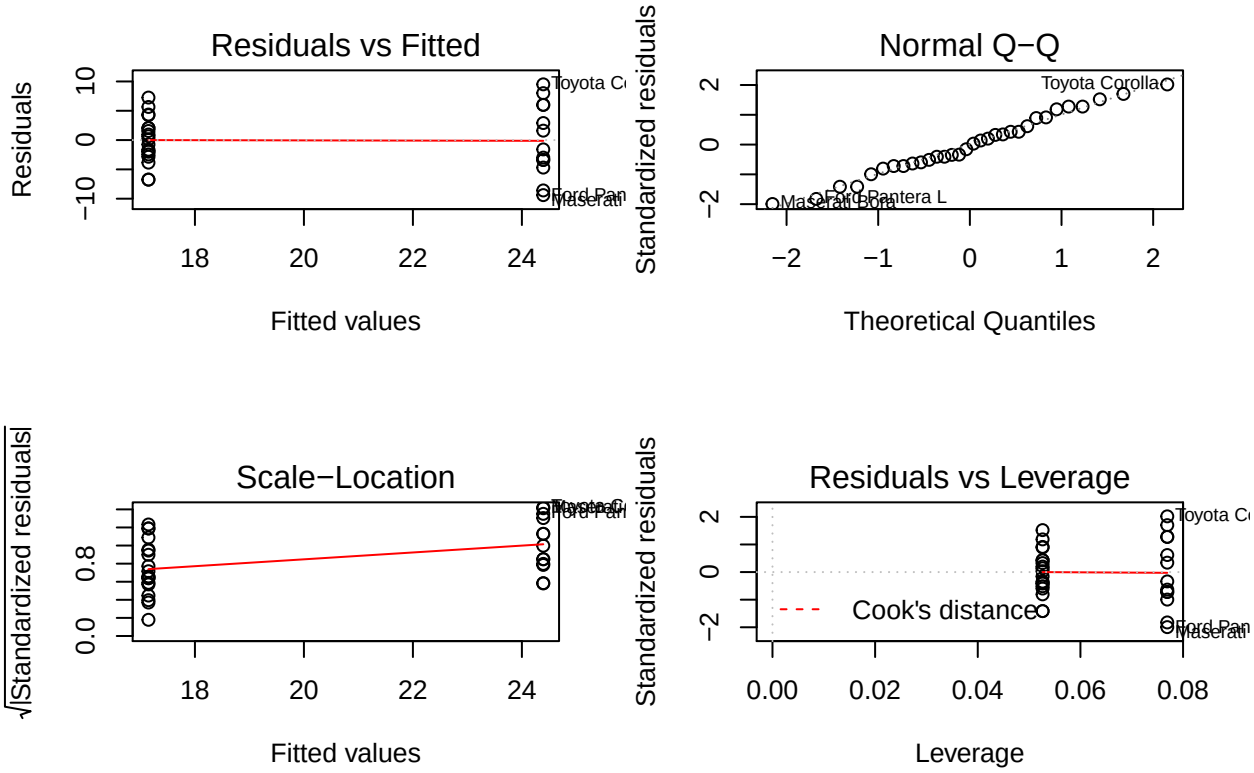
```
model <- lm(mpg ~ am, data = mtcars)
summary(model)
```

```
##
## Call:
## lm(formula = mpg ~ am, data = mtcars)
##
## Residuals:
##     Min      1Q  Median      3Q     Max
## -9.3923 -3.0923 -0.2974  3.2439  9.5077
##
## Coefficients:
##             Estimate Std. Error t value Pr(>|t|)
## (Intercept)   17.147      1.125  15.247 1.13e-15 ***
## am             7.245      1.764   4.106 0.000285 ***
## ---
## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1
##
## Residual standard error: 4.902 on 30 degrees of freedom
## Multiple R-squared:  0.3598, Adjusted R-squared:  0.3385
## F-statistic: 16.86 on 1 and 30 DF,  p-value: 0.000285
```

Since *p-value* is very small (**0.000285**) the variable *am* appears to be a good predictor for *mpg*.

Residuals Plot

```
par(mfrow = c(2, 2))
plot(model)
```



Quantify the MPG difference

In otder to quantify differenct of *MPG* between automatic and manual transmissions, let's calculate mean of two subsets

```
automatic <- subset(mtcars, am==0)
manual <- subset(mtcars, am==1)
mpg_a <- mean(automatic$mpg)
mpg_m <- mean(manual$mpg)
difference <- mpg_m - mpg_a
```

The difference between *mpg* of manual and automatic cars is 7.2449393.

Apendix I.

```
summary(mtcars)
```

```
